

10/7/26 DCA — ENTRY PACK v2 (decisions in: VEEV only)

Refreshed 10/7/26 at 8:03 AM ET, before the open, from your decisions (VEEV only, Moat 4, Rule 14 trailing, SLB's rows kept as a record) and the Fidelity 3711 history. Portfolio at the 10/6 closes (\$718.5K; VEEV closed \$283.50, pre-market \$282.00 on thin volume at 7:41 am); prices move with the open, so use the order-day card (section 2). These are your rulebook's outputs on your data, not a recommendation; the calls are yours. Supersedes the DRAFT pack (which keeps the SLB and Moat detail).

Bottom line

- VEEV 100 shares clear every entry gate I can compute. Rule 14 is ruled on the trailing basis (you, 10/6): 40.4x passes; FY26's 50.6x would have failed above \$282 (section 4). No open rulings are left for the open.
- Funding is clean: Fidelity cash \$24,367 + SPMO proceeds \$4,606 = \$28,973 covers 100 shares up to \$289.73. Cash after the buy ≈ 6.8% against the 5% floor; nothing is needed from Chase.
- The size cap (Moat 4, STRONG BUY, Fed -1% = 4%) is ≈ \$28.7K, so 100 shares stay inside it up to \$287.40; above that, buy 99 or fewer (section 2).
- Already in the workbook (committed 10/6 except the Drawdown Log entry): Entry Checklist and Implied-Return rows (now including GE and NFLX), the corrected Rule 14 column, Journal rows 100–103, Open Items, and the 10/6 Drawdown Log entry (posted this morning). Still to do after the fill: Current Positions and Performance Tracking (section 6).

1. VEEV against the entry rules

Gate	Result	Detail
Rules 6–8 (composite, Tier 1)	PASS	81.6 STRONG BUY (Moat 4, Visibility 5, Management 4); Tier 1 average 4.29; no Tier 1 indicator at 1.
Rule 5 (momentum floor)	PASS	No relative-strength or technical score of 1 (3-month +44%, 6-month +59%).
Rules 9–10 (staging)	PASS	Above its 200-week MA (reclaimed within 6 months), monthly MACD positive: standard initial size.
Rule 11 (binary events)	PASS	Next earnings 11/18, unconfirmed (Yahoo 11/25): six weeks out.
Rules 12–13 (implied return)	PASS	Base +12.5%, Bear +1.9%, Bull +18.7%; tags Likely / Possible / Possible. Bear stays ≥ 0% down to a 29.9x terminal.
Rule 14 (50x ceiling)	PASS	Ruled on the trailing basis (you, 10/6): 40.4x. FY26's 50.6x is not used (section 4).
Rule 15 (position cap, 8% at cost)	PASS	100 shares ≈ \$28.4K = 3.9% of the portfolio.
Rule 16 (sector cap 25%)	PASS	Healthcare 4.5% → 8.5%. (Technology is 27.6% at market, over the cap by drift: it blocks Technology adds, not this.)
Rule 18 (cash 5–15%)	PASS	10.75% now → 6.80% after the buy (floor \$35.9K).
Rule 38 (correlation ≤ 0.70)	PASS	Highest 0.51 (ADBE), on the 10/5 matrix.
Sizing	4% cap	Initial 5% less 1% for the Fed-tightening overlay (P/FCF above 40x) = 4% ≈ \$28,740. (The overlay switches off below ≈ \$282.7, where P/FCF is 40.0x.)
Part 7 and the tranche rule	PASS	Drawdown regime Normal: the 10/6 entry (flow-adjusted \$753.5K, Drawdown Log row 6) is a new running peak. S&P 500 closed 10/6 at a record 7,818.93 (prior record close 7,798.99): baseline tranche, no multiplier. Fed-tightening overlay still active; curve not inverted; HY under 600.
Insiders / analysts	note	No open-market purchases (no sizing bonus). New since 10/5: EVP Sales Daniel Rizzo sold 4,841 sh (\$1.34M, 36% of his holding, not under a 10b5-1 plan); a Form 144 filed 10/5 for Thomas Schwenger, listed as a Former Officer (President and Chief Customer Officer until recently), proposes selling 132,751 sh (about \$37.1M, option exercise and sale). I found no company announcement of a departure. No hard rule turns on insider sales; Management scored 4 with 'some senior departures' as a minor concern (at Management 3 the composite would sit right on the 80.0 STRONG BUY line). Fidelity score Bullish 8.0; pre-market news is routine product items.

2. Order-day card: 100 shares at the price you actually get

VEEV price	100 sh cost	% of portfolio	Inside the 4% cap?	Fidelity cash covers?	Total cash after
\$280.00	\$28,000	3.90%	yes	yes	6.85%
\$282.67 (Fed overlay line)	\$28,267	3.93%	yes	yes	6.82%
\$283.50 (now)	\$28,350	3.95%	yes	yes	6.80%
\$286.00	\$28,600	3.98%	yes	yes	6.77%
\$287.40 (4% cap)	\$28,740	4.00%	yes	yes	6.75%
\$288.00	\$28,800	4.01%	no: 99 sh	yes	6.74%
\$289.73 (cash limit)	\$28,973	4.03%	no: 99 sh	yes	6.72%
\$292.00	\$29,200	4.06%	no	short \$227	6.69%

The cap moves with the portfolio (4% of \$718.5K today). Rule 14 on the ruled trailing basis needs $P/FCF \leq 50x$, i.e. any price up to \$353.

3. Fidelity 3711 cash, reconciled to your history

Step	Amount	Note
Workbook Fidelity cash (FZDXX + FZFXX, tied to the 9/30 statements)	\$39,328.19	Current Positions rows 14–15
– EFT withdrawal, 10/2	–\$15,000.00	not yet in the workbook
+ NVDA dividend, 10/1	+\$38.75	
= Fidelity cash now	\$24,366.94	equals the balance on your slate
+ SPMO sale 10/6: 30 sh at \$153.54, net of a \$0.10 fee	+\$4,606.10	journalled to cash at settlement, 10/7; no pending orders
= Available for VEEV	\$28,973.04	100 sh at the slate's \$284 would leave \$573

Cross-check: positions at market plus this cash agree with Fidelity's own JT ULTRA_3711 balance (\$399,609.14 at 12:41 pm ET) to within \$11. The running Cash Balance column shows the 9/30 GE/NFLX settlement used up the dividend cash the 10/4 reconciliation had carried as FZFXX, so the money sits in FZDXX. Chase is carried at your slate's \$11,408.02 core cash and the workbook's \$36,854.47 VMFXX (the 9/30 statement value; not re-verified). The file also lists other household accounts; I used only 3711.

Drawdown Log: net external withdrawals since the 9/4 peak are \$16,500 (9/9) + \$20,000 (9/14) + \$19.99 (9/15 PayPal) + \$15,000 (10/2) less the \$16,500 that entered Chase on 9/8 = \$35,019.99 (\$20,019.99 was added back in the 9/30 entry; the 10/2 \$15,000 is new). On that basis the portfolio is \$753.5K against the 9/4 peak of \$751.2K: a new high, regime Normal. Posted this morning as the 10/6 entry (\$753,520.32; Drawdown Log row 6).

4. Rule 14's basis: ruled trailing (VEEV free cash flow after stock comp)

\$M	FY26 (to 1/31/26)	TTM (to 7/31/26)	Source
Cash from operations	1,415.2	1,665.5	10-K FY26; 10-Q Q2 FY27 (FY + 6M – prior 6M)
Capex incl. capitalized software	(29.1)	(26.7)	XBRL PaymentsForSoftware (no PP&E-purchase fact)
Stock-based compensation	(472.7)	(494.6)	cash-flow statement
FCF after stock comp (Part 10)	913.4	1,144.2	per share \$5.64 / \$7.07 on 161.9M sh
P/FCF at \$283.50	50.3x	40.1x	market cap basis; net cash \$7.1B not credited
Price where P/FCF = 50x	\$282	\$353	

You ruled the trailing basis on 10/6 (the rule speaks of the current multiple, and FY26 ended eight months ago), so the Entry Checklist row stays at 40.4x and reads YES. For the record, FY26 would have failed the ceiling above \$282, with no exception available (it needs consensus FCF growth above 30%; consensus is about 12.5%). The ruling is in the Journal (row 102).

5. Already in the live workbook (committed 10/6; this morning's Drawdown Log entry is not yet)

- Entry Checklist: table extended to A2:S51 (rows 48–51 = KGS, ABT, SLB, VEEV). SLB's row reads DO NOT ENTER (Base +6.2%, Bear –9.4%) and stays as the record; VEEV's reads YES / Initiate: Standard initial size.
- Rule 14 column corrected on every row: it had read the Rule 13 tag check as the P/FCF, the P/FCF as the growth rate, and the Base case where the rule names the Bear case, so the 50x ceiling was never enforced (V's row said "exception met" at 34.4x; it now says "within ceiling" and stays YES).

- Implied-Return rows 51 (SLB) and 52 (VEEV); Action Items counts and Schema Reference ranges; Open Items #24 closed (Moat 4), #33 (NBIX, paused), #34 (SLB/ABT, paused to 10/13) and #35 (NFLX) added; Journal rows 100–103. Audit: 69 of 71 pass (the two standing scoring_verification findings).
- GE and NFLX backfilled (Journal row 102): their Entry Checklist and Implied-Return rows were blank. Both clear Rules 12–14 (GE only just: Base +11.6%, Bear +0.6%; NFLX Base +15.0%, Bear +3.1%, after taking out the \$2.8B Warner Bros. fee). NFLX's 9/30 purchase was about \$2.9K over its 50% staged limit, which you accepted as an exception (the 90-day review is still due 12/29: Open Items #35). I also fixed a bug in the SEC trailing-12-month tool that had misread NFLX's cash flow; no earlier decision changes.

6. After the fill

Tell me the fill (or I read it from Activity & Orders). Then one bookkeeping pass, so Current Positions changes once:

- Current Positions: cash rows to the real balances, SPMO at Fidelity 100 → 70 sh (cost basis an average-cost estimate unless you give me the lots), and VEEV's row (a row insertion, so I rehearse it first and you reopen the file in Excel).
- Performance Tracking: VEEV System lot; the SPMO partial sale as a sold baseline lot plus a rebase. Then `landry prices add VEEV`, Monitor Category → Owned plus `monitor stamp`, a Journal entry for the fills, and the DCA-CATCHUP-2 rows of the Process Checklist.
- From you: which SPMO lots you sold (Part 8, Rule 42).

7. The remainder of the tranche

Name	Status	Why	Earnings
NBIX	paused (you, 10/6)	The event risk (Vykat XR safety reports, the Justice Department inquiry) needs more time to evaluate; no further work until you reopen it. First pass is in NBIX_Part12_Workup_DRAFT.	10/26
SPOT	alternate; no workup	Quant 4 / 4 / 4, ROIC 5; relative strength 1 triggers Rule 5.	10/22
ABT	re-look paused to 10/13	Passes Rule 12 narrowly (+10.5% / +2.5%); relative strength 1, MACD negative (half size ≈ \$10.9K), Fidelity Bearish 2.9, \$46M non-plan CEO sale.	10/21
SLB	failed; paused to 10/13	Base +6.2%, Bear −9.4%; needs about 9.3% a year of per-share FCF growth at 16.8x (consensus ≈ 7.8%).	10/23
GE top-up	too small	About \$5K to its initial cap.	10/20

Earnings season (GE and NFLX 10/20 through NBIX 10/26) crowds the 10/22 tranche; the plan's guardrail is that pace never overrides the Composite ≥ 65 gate, so the unspent ~\$20K simply waits.

Sources: Veeva Q2 FY27 release (8/26/26), 10-K FY26 and 10-Q Q2 FY27 (SEC XBRL); Fidelity research pages and Activity & Orders (10/5–10/6); consensus via yfinance; the SEC TTM tool.
