

BRAND REFRESH - REVISED DIRECTION

First-Party Filament: Three Lines, One System

Simplifying the names, folding the engineering composites into PRO, and making country-of-origin a clear, per-product label.

MatterHackers ThriftyMake

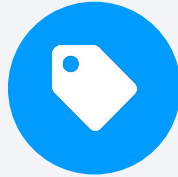

MatterHackers Build

MatterHackers PRO

Two decisions reshape the portfolio

This refresh simplifies how the lines are named and gives the engineering composites a home - without launching a new brand.

01

Simplify the names

Drop "Series." Every line carries the full MatterHackers wordmark: MatterHackers ThriftyMake, MatterHackers Build, and MatterHackers PRO.

02

Fold engineering into PRO

NylonX, NylonG and NylonK join PRO instead of a separate line. PRO becomes the premium-performance tier - and we label country-of-origin on each SKU.

THE PROBLEM IT SOLVES

PRO no longer has to mean "Made in USA"

The old tension: PRO was defined by domestic manufacturing, so premium imported composites had nowhere to live. Broadening PRO to mean performance - and labeling origin per SKU - dissolves it.

Before: composites were orphaned

NylonX/G/K are premium but imported - they broke PRO's American-made promise and sat on PRO URLs with no real home.

Now: PRO = performance

PRO is the professional-grade tier. The composites belong there on merit, alongside the US-made precision staples.

The USA story is kept - as a badge

"Made in USA" moves from the brand's gate to a visible, filterable per-SKU label. Still celebrated, no longer exclusionary.

Cleaner names, one consistent wordmark

Drop "Series" and lead with the full MatterHackers name. Shorter, more modern, and consistent across the shelf and the site.

~~ThriftyMake~~

MatterHackers ThriftyMake

Distinct sub-brand name kept; just prefixed with MatterHackers for consistency.

~~MH Build Series~~

MatterHackers Build

"MH" expands to the full wordmark; "Series" dropped. Protects the #1-seller equity.

~~PRO Series~~

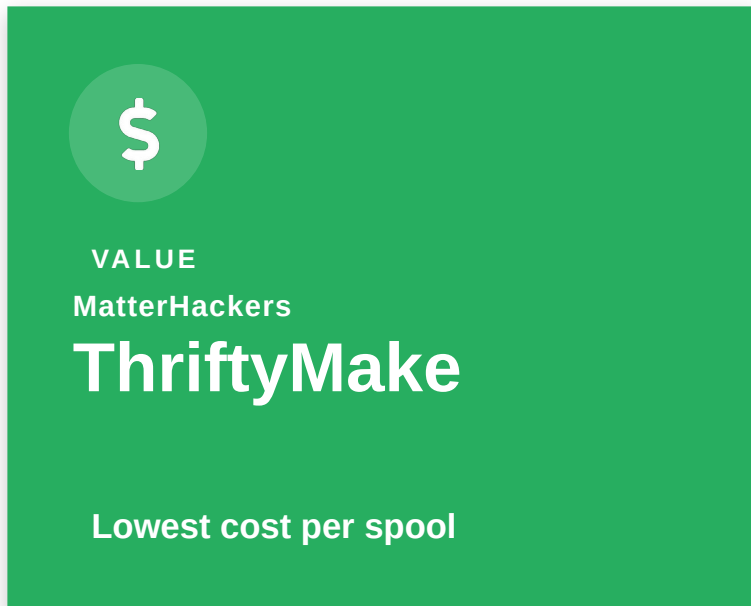

MatterHackers PRO

"Series" dropped; PRO stands on its own as the premium-performance tier.

Design note: "MatterHackers Build" is longer than "MH Build" - the label system (slide 11) keeps the wordmark compact and the tier name dominant.

Three lines, one ladder

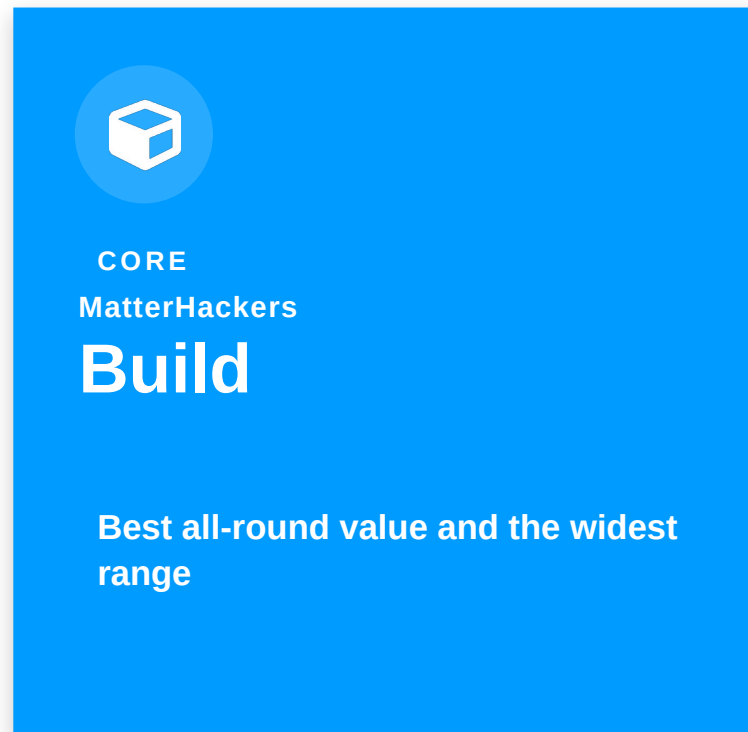

Value, core, and premium - with the engineering composites living inside PRO rather than in a fourth brand.

VALUE
MatterHackers
ThriftyMake

Lowest cost per spool

CORE
MatterHackers
Build

Best all-round value and the widest range

PREMIUM - PROFESSIONAL
MatterHackers
PRO

Top performance and tightest tolerances, now including the engineering composites - origin labeled per SKU

Redefining PRO: performance first, origin labeled

The definition of PRO changes - from a manufacturing-origin claim to a performance standard. This is what makes folding in the composites work.

WAS

"American-made precision"

- Origin was the boundary of the line
- Tolerance + Made-in-USA defined PRO
- Premium imports were locked out

NOW

"Professional-grade performance"

- ✓ Tightest tolerances & engineered formulations
- ✓ Spans US-made staples + global composites
- ✓ Country-of-origin shown on every SKU

What we protect: the American-made story stays front-and-center as a badge buyers can see and filter - a real asset for government, defense and domestic-sourcing customers - without capping what PRO can include.

Every PRO SKU says where it's made

If origin is no longer the brand boundary, it has to be unmistakable at the product level. One badge, one filter, applied everywhere.

THE LABELS

US-made SKUs

e.g. PRO PLA, ABS, ASA,
Nylon, PPS

Imported SKUs

e.g. NylonX, NylonG,
NylonK - country shown
where known

Where it shows up

On the product page & spool label

A clear origin line on every PRO listing and physical label - no digging required.

As a store filter

A site-wide "Made in USA" toggle so buyers who require domestic sourcing can shop it in one click.

As a curated collection

Feed a "Made in USA" collection into the government / defense storefront where it matters most.

Backed by honesty

Never hide that a composite is imported. Transparency protects the trust PRO has built.

One PRO banner, two material families

Both share PRO's tolerances, QA and premium price band. An optional "Composite" descriptor aids navigation - no separate brand needed.

PRO · PRECISION STAPLES

Domestic, functional workhorses

- PLA · Tough PLA · ABS · ASA
- PETG · Nylon · PPS · PVA support
- +/-0.02mm tolerance, color-consistent
- Made in USA badge applies

PRO · COMPOSITE (ENGINEERING)

IMPORTED

Fiber-reinforced, metal-replacing

- **NylonX** - carbon-fiber flagship
- **NylonG** - glass-fiber stiffness
- **NylonK** - Kevlar / aramid toughness
- **Origin** - labeled per SKU; not US-made

One promise, one line, one tagline

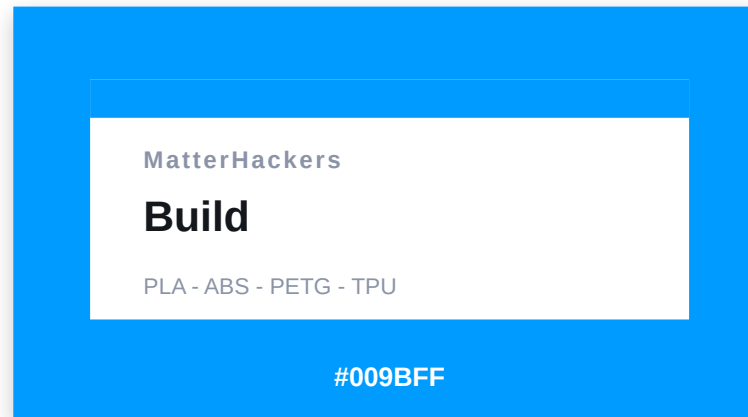

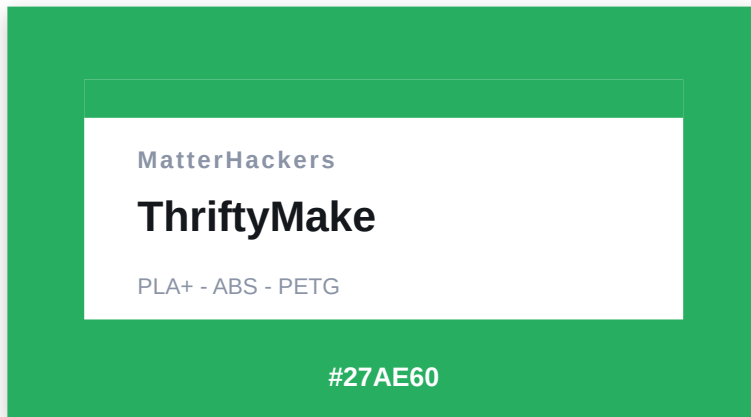

How the simplified three-line family talks - at a glance.

Line	Tier	Positioning	Tagline	Proof point
MatterHackers ThriftyMake	Value	Reliable quality at the lowest catalog price	"Quality that costs less."	Lowest price in the catalog
MatterHackers Build	Core	Consistent color & performance, batch to batch	"Consistency you can count on."	#1-selling filament at MatterHackers
MatterHackers PRO	Premium / professional	Top performance for functional & end-use parts	"Performance when it counts."	+/-0.02mm; composites; origin labeled

The taglines ladder cleanly - **Quality, Consistency, Performance** - so the two budget lines never both claim "affordable," and PRO stays origin-neutral.

Three tier colors + a Made-in-USA badge

One label template across all three lines; color signals the tier; the USA badge overlays on qualifying SKUs.

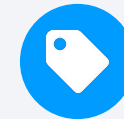

Color = tier

Green / blue / red read the value-core-premium ladder instantly, in store and online.

Badge = origin

The Made-in-USA stamp overlays only on qualifying SKUs - a visible mark of pride and a filter.

One wordmark lockup

"MatterHackers" sits small above a dominant tier name - keeps the longer names tidy.

Rollout, risks & next steps

Phased rollout

01 Rename

Roll out MatterHackers
ThriftyMake / Build / PRO across
site & labels.

02 Re-home composites

Move NylonX/G/K into PRO; 301-
redirect old URLs to preserve
SEO.

03 Ship origin labels

Add the Made-in-USA badge, per-
SKU origin line, and store filter.

04 Promote

Relaunch PRO around
performance; feature the USA
collection for gov/defense.

Risks & mitigations

Diluting PRO's USA equity

Lead PRO with performance, but keep the
badge prominent and the USA collection
curated.

SEO loss on moved/renamed pages

301-redirect every old URL; keep product
names (NylonX/G/K) verbatim in titles.

Origin data gaps

Default imported SKUs to "Globally sourced";
add country as supplier data allows.

Next: approve the three names, sign off PRO's new definition, and brief design on the label + badge system.
